Quality through science and compliance

Our Quality Control (QC) group's primary focus is to verify the integrity of our processes and products and ensure they meet specifications.

Our Quality Control team verifies process and product excellence through services that include:

Quality

Our Quality Control team verifies process and product excellence through services that include:

- Supporting method development projects, transfer and validation of testing methodology used to control raw materials, production intermediates, and final products
- Performing analytical and microbiological testing at all stages of the manufacturing process, from raw material through final product release
- Maintaining a robust environmental monitoring program of the manufacturing suite and utilities
- Performing reference material qualification
- Providing a full suite of stability services:
 - Real-time stability
 - Accelerated stability
 - Forced degradation
 - Photo stability
 - Freeze/thaw studies
 - Submission-ready reports
 - Trending/shelf life analysis

Our Quality Control group serves as our internal oversight team, so that you can rest assured that your product is receiving the utmost attention to detail needed to achieve compliance.

Our focus on quality goes hand in hand with our excellent inspection and compliance history, providing you with peace on mind in your choice of a CDMO partner.
