

CGMP MANUFACTURING

Built for your program.

Proven at scale.

Clinical and commercial CGMP biologics manufacturing at Avid Bioservices. Mammalian production across multiple single-use bioreactor scales, with the track record, capacity, and regulatory history to support every stage of your program.

OVERVIEW

A manufacturing operation built to support every stage of your program.

Avid's CGMP manufacturing operations have produced more than 650 GMP batches across three decades of biologics work: 325 clinical and 275 commercial. The infrastructure is single-use throughout, multi-line, multi-scale, and designed for the biotech and biopharma programs that have to ship.

Three dedicated drug substance manufacturing lines. Multiple bioreactor scales from 100L through 2,000L. Multi-plex CGMP campaigns running in parallel. One unified quality system across the operation. And a regulatory track record built one inspection at a time, for 23 consecutive years.

MANUFACTURING LINES

Capacity designed to scale with your program.

Three drug substance lines. Multi-scale capacity. Single-use throughout.

Biologics solutions

- Mammalian cell culture
- Harvest & clarification
- Downstream purification
- Bulk drug substance
- In-process & release testing

Diverse modalities

- Monoclonal antibodies (mAbs)
- Multispecific antibodies
- Fusion proteins
- Recombinant proteins
- And other diverse modalities

Quality & regulatory

- CGMP batch records
- Certificates of analysis
- 23-year inspection history
- Pre-approval inspection support
- Annual product reviews

WHY AVID BIOSERVICES

The track record behind a manufacturing operation that ships.

600+ batches produced

Clinical and commercial GMP campaigns across three decades. Track record measured in batches.

23 years inspected

23 consecutive years of successful FDA inspections. A regulatory record built one campaign at a time.

Single-use throughout

Single-use bioreactors across both lines. Faster changeovers. Simpler validation. Modern by design.

Multi-line, multi-scale

Parallel campaign capability. Right-sized for clinical, scaled for commercial. One facility, two lines.

US-based throughout

Tustin, California. Domestic supply chain. BIOSECURE Act-aligned. FDA inspections on US time.

Let's manufacture what's next.

Whether your program needs Phase 1 clinical material or commercial-scale supply for an approved product, Avid's manufacturing operation is built to deliver. Avid's manufacturing operation is built to deliver, successfully executing 650+ batches. Ready for the next one.
